# 1 Introduction

## 1.1 Intended Use

The sample gas probe is intended for installation into gas analysis systems in commercial applications.

Sample gas probes are among the main components in a gas conditioning system.

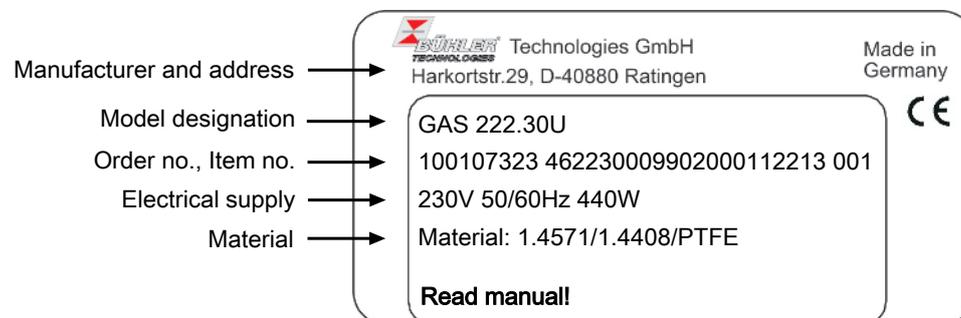

- Therefore also note the related drawing in the data sheet in the appendix.
- Before installing the device, verify the listed technical data meet the application parameters.
- Further verify all contents are complete.

Please refer to the type plate to identify your model. In addition to the job number/ID number, this also contains the article number and model designation.

Please note the specific values of the device when connecting, and the correct versions when ordering spare parts.

## 1.2 Type Plate

### Example:

## 1.3 Scope of Delivery

- 1 x Sample gas probe
- 1 x Flange gasket and screws
- Product documentation
- Connection and mounting accessories (only optional)

## 1.4 Ordering Instructions

The item number is a code for the configuration of your unit. Please use the following model key:

4622235	0	9	9	0	0	X	0	0	X	X	X	X	X	X	X	Product Characteristics
																<b>Flange / approval</b>
																DIN DN65 PN6
																<b>Power supply sample probe</b>
																none
																<b>Calibrating gas connection</b>
					0											No calibrating gas connection
					1											6 mm
					2											6 mm + check valve
					3											1/4"
					4											1/4" + check valve
																<b>Connection heated extension</b>
																No
																<b>Built-in temperature controller for heated extension</b>
																No
																<b>Blowback with air reservoir <sup>1)</sup></b>
																<b>Air reservoir bracket</b>
																<b>Air reservoir heating</b>
						1										Yes
						9										No
																<b>Built-in blowback control</b>
							9									No
																<b>Compressed air valve / valve voltage information</b>
								0								Manual
								1								115 V
								2								230 V
								3								24 V
								9								None (if no blowback requested)
																<b>Pneumatic drive for ball valve</b>
									9							N/A
																<b>Limit switch for pneumatic drive</b>
										9						No
																<b>Control valve for pneumatic drive</b>
											9					No control valve

<sup>1)</sup> For flammable sample gas, always use inert gas for blowback. Probe blowback prohibited when using explosive gases!

## 1.5 Product Description

Probe	Description
GAS 222.35-U	Probe with retractable inlet filter and blowback connection
Accessories	Please refer to the data sheet at the end of this manual for accessories for this probe

## 2 Safety instructions

### 2.1 Important advice

This unit may only be used if:

- The product is being used under the conditions described in the operating- and installation instructions, used according to the nameplate and for applications for which it is intended. Any unauthorized modifications of the device will void the warranty provided by Bühler Technologies GmbH,
- Complying with the threshold values specified in the data sheet and the instructions,
- Equipment is operated in intrinsically safe electric circuits.
- The controller itself is installed outside the explosive area,
- Monitoring equipment / protection devices must be connected correctly,
- Service and repair work not described in these instructions are performed by Bühler Technologies GmbH,
- Using genuine replacement parts.
- Erecting electrical systems in explosive areas requires compliance with regulation EN 60079-14.
- Additional national regulations pertaining to initial operation, operation, maintenance, repairs and disposal must be observed.
- These operating instructions are a part of the equipment. The manufacturer reserves the right to change performance-, specification- or technical data without prior notice. Please keep these instructions for future reference.

### Signal words for warnings

<b>DANGER</b>	Signal word for an imminent danger with high risk, resulting in severe injuries or death if not avoided.
<b>WARNING</b>	Signal word for a hazardous situation with medium risk, possibly resulting in severe injuries or death if not avoided.
<b>CAUTION</b>	Signal word for a hazardous situation with low risk, resulting in damaged to the device or the property or minor or medium injuries if not avoided.
<b>NOTICE</b>	Signal word for important information to the product.

### Warning signs

These instructions use the following warning signs:

	Warns of a general hazard		General notice
	Warns of voltage		Unplug from mains
	Warns not to inhale toxic gasses		Wear respiratory equipment
	Warns of corrosive liquids		Wear a safety mask
	Warns of explosive areas		Wear gloves

## 2.2 General Hazard Warnings

The maximum surface temperatures of the probes also vary based on operating conditions (steam temperature, sample gas inlet temperature, ambient temperature, fluid flow rate). When used in **explosive areas, also particularly note** the related hazard warnings.

The equipment must be installed by a professional familiar with the safety requirements and risks.

Be sure to observe the safety regulations and generally applicable rules of technology relevant for the installation site. Prevent malfunctions and avoid personal injuries and property damage.

### The operator of the system must ensure:

- Safety notices and operating instructions are available and observed,
- The respective national accident prevention regulations are observed,
- The permissible data and operational conditions are maintained,
- Safety guards are used and mandatory maintenance is performed,
- Legal regulations are observed during disposal,
- compliance with national installation regulations.

### Maintenance, Repair

Please note during maintenance and repairs:

- Repairs to the unit must be performed by Bühler authorised personnel.
- Only perform conversion-, maintenance or installation work described in these operating and installation instructions.
- Always use genuine spare parts.
- Do not install damaged or defective spare part. If necessary, visually inspect prior to installation to determine any obvious damage to the spare parts.

Always observe the applicable safety and operating regulations in the respective country of use when performing any type of maintenance.

#### NOTICE

#### When used in explosive areas

The basic version of the probe is not suitable for use in **Zone 1 or 21** explosive areas. The accessories selected (e.g. add-on parts such as solenoid valves, heated blowback vessel...) may severely limit the approved applications.

When using **category 3G or 3D accessories**, the area of application for the probe is limited to **Zone 2 or Zone 22**. Therefore be sure to note the type plates for all add-on parts. Particularly pay attention to the ignition protection markings and all hazard warnings in this manual.

#### DANGER

#### Adiabatic compression during gas blowback (explosion hazard)!

Adiabatic compression may cause high gas temperatures and must be checked by the user.

Gas blowback may result in high gas temperatures due to adiabatic compression. This can cause flammable gases to ignite spontaneously.

- a) Blowback of explosive atmosphere / gases is prohibited.
- b) Flammable atmosphere / gases (non-explosive) may only be blown back with nitrogen (inert gas).

#### DANGER

#### Electrical voltage

Electrocution hazard.

- a) Disconnect the device from power supply.
- b) Make sure that the equipment cannot be reconnected to mains unintentionally.
- c) The device must be opened by trained staff only.
- d) Regard correct mains voltage.

**DANGER****Toxic, corrosive gas/condensate**

Sample gas/condensate may be hazardous to health.

- a) If necessary, ensure a safe gas/condensate discharge.
- b) Always disconnect the gas supply when performing maintenance or repairs.
- c) Protect yourself from toxic/corrosive gasses/condensate when performing maintenance. Wear appropriate protective equipment.

**DANGER****Explosion hazard**

Life and explosion risk may result from gas leakage due to improper use.

- a) Use the devices only as described in this manual.
- b) Regard the process conditions.
- c) Check tubes and hoses for leakage.

**DANGER****Use in explosive areas**

Flammable gasses and dust could ignite or explode. Avoid the following hazard sources:

**Sparking!**

Protect the equipment from external blows.

**Flame propagation!**

If the process holds a risk of flame propagation, install a flame arrester.

**Dust:**

If possible, take the electrical components which must be opened for repair to a dust-free room. If unable to do so, prevent dust from entering the housing.

**Ignition of dust layers!**

When using the device in a dusty environment, routinely clean dust from all components. Also remove layers of dust in inaccessible areas.

**DANGER****Dangerous electrostatic charge (explosion hazard)**

Incendive electrostatic charges may occur when cleaning plastic housing parts and decals (e.g. with a dry cloth or compressed air). The sparks this produces could ignite flammable, explosive atmospheres.

Always clean plastic housing parts and decals **with a damp cloth!**

**DANGER****Explosion hazard due to high liquid temperatures**

Hot steam and hot sample gas cause in a high probe surface temperature. The highest fluid temperature is approximately the maximum probe surface temperature.

- a) Always ensure a safety clearance of at least 20 K between the fluid temperature (steam, sample gas) and ignition temperature of explosive atmosphere (by measuring and monitoring the temperature).
- b) Also be sure to stay well below the smouldering temperatures of dust.
- c) Observe the relevant requirements in standards regarding the max. permissible surface temperature and ignition temperature of explosive atmosphere.

## 3 Transport and storage

Only transport the product inside the original packaging or a suitable alternative.

The equipment must be protected from moisture and heat when not in use. They must be stored in a covered, dry and dust-free room at a temperature between -20 °C to 50 °C (-4 °F to 122 °F).

## 4 Installation and connection

### 4.1 Installation site requirements

Sample gas probes are intended for flange mounting.

- Installation site and installation position are determined based on requirements specific to the application.
- If necessary, the connection piece should be slightly tilted toward the centre of the channel.
- The installation site should be protected from the weather.
- In addition, adequate and safe access for installation and future maintenance work should be provided. Particularly follow the uninstalled size of the probe tube!

If the probe is transported to the installation site in pieces, it will first need to be assembled.

### 4.2 Installation

#### DANGER

#### Danger to life and explosion during installation and maintenance

The unit must not be worked on (assembly, installation, maintenance) in explosive atmospheres.

#### DANGER

#### Explosion hazard

#### When used in explosive areas

Flammable gasses and dust could ignite or explode.  
Never operate the gas probe outside the specifications. Extracting gases or gas mixtures which are also explosive in the absence of air is prohibited.

#### DANGER

#### Explosion hazard due to ignition of dust

When using the device in a dusty environment, routinely clean dust from all components.

The ignition temperature resp. smouldering temperature of flammable dusts resp. dust layers present must be considerably higher than the maximum surface temperature of the device (observe applicable standards and statutory regulations).

If possible, take the electrical components which must be opened for repair to a dust-free room. If unable to do so, prevent dust from entering the housing.

#### DANGER

#### Explosion hazard due to flame propagation

Severe injuries and damage to the system  
If the process holds a risk of flame propagation, install a flame arrestor.

#### DANGER

#### Dangerous electrostatic charge (explosion hazard)

Incendive electrostatic charges may occur when cleaning plastic housing parts and decals (e.g. with a dry cloth or compressed air). The sparks this produces could ignite flammable, explosive atmospheres.

Always clean plastic housing parts and decals **with a damp cloth!**

### 4.3 Installing the upstream filter

The upstream filter, if necessary with matching extension, must be screwed in. The probe is then attached to the mating flange using the included seals and screws.

## 4.4 Connecting the Gas Line

The sample gas line must be carefully and properly connected using a suitable fitting.

This table provides an overview of the sample gas probe connections:

	Probe GAS 222	Reservoir PAV01	Ball valve pneumatic drive	Control valve 3/2-way solenoid valve
Connecting flange <sup>1)</sup>	DN65/PN6/ DN3"-150 <sup>2)</sup>			
Sample gas inlet	G3/4			
Sample gas outlet	NPT 1/4			
Blowback connection	G3/8			
Test gas connection <sup>1)</sup>	Tube Ø6 mm Tube Ø1/4" <sup>2)</sup>			
Filling port		NPT 1/4		
Condensate		G1/2		
Bypass		NPT 1/4		
Control air			G1/8	G1/4 NPT 1/4

Tab. 1: Gas Probe Connections (Varies by Model)

<sup>1)</sup> Varies by version.

<sup>2)</sup> Only GAS 222.xx ANSI and GAS 222.xx AMEX

### WARNING

#### Gas emanation

**Sample gas can be harmful to the health!**

Check the lines for leaks.

### 4.4.1 Blowback Connection

Without accessories installed for the blowback device, the blowback connection comes with a sealed G3/8 screw-in connection. If you require blowback, you will need to undo this screw-in connection and ensure the blowback line is connected properly and tight.

### DANGER

#### Toxic, corrosive gasses

Explosive or toxic gases can develop due to a leaking or open blowback connection.

### 4.4.2 Connecting the calibrating gas line (optional)

Connecting the calibrating gas line requires a Ø6 mm or Ø1/4" pipe fitting.

If the calibrating gas connection was ordered with check valve, a Ø6 mm or Ø1/4" pipe can be connected directly to the check valve.

## 4.5 Connecting the Blowback and Pressure Vessel (Optional)

The air lines must be connected carefully and properly, using suitable fittings.

If the probe is equipped with pressure vessel for efficient blowback (optional), a manual shut-off valve (ball valve) must be installed in the air supply, immediately upstream from the pressure vessel.

On probes used to sample flammable gas, nitrogen (inert gas) must be used for blowback. Blowback of explosive gases is prohibited.

### NOTICE

The operating pressure of the compressed air (inert gas) required for blowback must always be higher than the process pressure.  
Required pressure differential min. 3 bar (44 psi).

### DANGER

#### Broken pressure vessel

##### Gas leak, danger due to flying parts.

Maximum operating pressure of the pressure vessel 10 bar (145 psi)!  
The operating pressure reduces based on the operating voltage (see solenoid valve type plate).

### DANGER

#### Adiabatic compression during gas blowback (explosion hazard)!

Adiabatic compression may cause high gas temperatures and must be checked by the user.

Gas blowback may result in high gas temperatures due to adiabatic compression. This can cause flammable gases to ignite spontaneously.

- Blowback of explosive atmosphere / gases is prohibited.
- Flammable atmosphere / gases (non-explosive) may only be blown back with nitrogen (inert gas).

## 4.6 Electrical Connections

### DANGER

#### Explosion hazard due to absence of potential equalisation

The device must be connected to potential equalisation (earthed) at the designated points.

Please observe the local regulations and guidelines.

### CAUTION

#### Wrong mains voltage

Wrong mains voltage may damage the device.

Regard the correct mains voltage as given on the type plate.

### Atex valves only:

### DANGER

#### Explosion hazard when opening the solenoid valve housing

The solenoid valve is a closed system. It must not be removed!

A fuse suitable for the rated current (max. 3 x I<sub>b</sub> per IEC 60127-2-1) or a protective motor switch with short circuit and fast thermal response (set for rated current) must be connected upstream from each magnet to prevent short-circuits.

- For magnets with a very low rated current, a fuse of the lowest current value under the IEC standard will suffice. This fuse must be connected separately, upstream.
- The rated fuse voltage must be equal to or greater than the specified nominal voltage (U<sub>N</sub>+10 %) of the magnet. The fuse rating is specified in the type plate of the solenoid valve.
- The limiting breaking capacity of the fuse element must be equivalent to or greater than the maximum short-circuit current expected at the installation site (typically 1500 A).

## 4.6.1 Heated Pressure Vessel (Optional)

A heated blowback vessel may optionally be used for blowback. Heated via self-regulating PTC heating cartridge to protect against frost.

The electrical connection (mains connection 115/230 V AC) uses a cubic plug as per DIN 43650. Please refer to the terminal diagram at the end for the connection.

- Only use cables with a temperature resistance of  $> 100\text{ }^{\circ}\text{C}$  to connect to power.
- Make sure the connecting cable has sufficient strain relief (match cable diameter to the seal on the socket).
- When connecting, also observe the applicable Ex protection regulations and general warnings in these operating instructions.

### CAUTION

#### Equipment damage

Cables damaged

Do not damage the cable during installation. Install a strain relief for the cable connection. Secure the cable against twisting and loosening. Please note the temperature resistance of the cables ( $> 100\text{ }^{\circ}\text{C}/212\text{ }^{\circ}\text{F}$ ).

### DANGER

#### Adiabatic compression during gas blowback (explosion hazard)!

Adiabatic compression may cause high gas temperatures and must be checked by the user.

Gas blowback may result in high gas temperatures due to adiabatic compression. This can cause flammable gases to ignite spontaneously.

- a) Blowback of explosive atmosphere / gases is prohibited.
- b) Flammable atmosphere / gases (non-explosive) may only be blown back with nitrogen (inert gas).

### DANGER

#### When used in explosive areas:

##### Application limitations

Heated pressure vessels suitable for use in Ex areas bear an **ignition protection mark** in the type plate. These pressure vessels are only suitable for **use in Zone 2 (equipment category 3G)**.

## 5 Operation and Control

### NOTICE

The device must not be operated beyond its specifications.

### 5.1 Before Start-Up

#### Before starting the device, verify

- the hose- and electrical connections are not damaged and correct installed.
- no parts of the gas probe have been removed.
- the safety and monitoring devices are installed and functional.
- the gas inlet and outlet of the gas probe are open.
- ambient parameters are met.
- the performance specifications in the type plate are met.
- voltage and frequency in the type plate match the mains values.
- all connection cables are installed without strain.
- precautions have been taken.
- cable glands are sealed properly.
- the earth is proper and functional.

When used in Ex areas, also verify the probe and all add-on parts are suitable for use (observe type plates and ignition protection markings) and compliance with applicable Ex regulations.

## 6 Maintenance

During maintenance, remember:

- The equipment must be maintained by a professional familiar with the safety requirements and risks.
- Only perform maintenance work described in these operating and installation instructions.
- When performing maintenance of any type, observe the respective safety and operation regulations.

### DANGER

#### Danger to life and explosion during installation and maintenance

The unit must not be worked on (assembly, installation, maintenance) in explosive atmospheres.

### DANGER

#### Electrical voltage

Electrocution hazard.

- Disconnect the device from power supply.
- Make sure that the equipment cannot be reconnected to mains unintentionally.
- The device must be opened by trained staff only.
- Regard correct mains voltage.

### DANGER

#### Toxic, corrosive gases

The measuring gas led through the equipment can be hazardous when breathing or touching it.

- Check tightness of the measuring system before putting it into operation.
- Take care that harmful gases are exhausted to a safe place.
- Before maintenance turn off the gas supply and make sure that it cannot be turned on unintentionally.
- Protect yourself during maintenance against toxic / corrosive gases. Use suitable protective equipment.

### CAUTION

#### Hot surface

Risk of burns

Depending on the operating parameters, the housing temperature may reach over 100 °C during operation.

Allow the unit to cool down before performing maintenance.

### DANGER

#### Explosion hazard due to ignition of dust

When using the device in a dusty environment, routinely clean dust from all components.

The ignition temperature resp. smouldering temperature of flammable dusts resp. dust layers present must be considerably higher than the maximum surface temperature of the device (observe applicable standards and statutory regulations).

If possible, take the electrical components which must be opened for repair to a dust-free room. If unable to do so, prevent dust from entering the housing.

## 6.1 Maintaining the Filter Element

The probes feature a particle filter which needs to be changed as it becomes dirty.

To do so, disconnect the voltage supply and if applicable close the shut-off valve to the process or switch off the process.

**CAUTION! Do not damage the rear filter seat.**

### NOTICE

The **stainless steel filter elements** can be cleaned with an ultrasonic bath and reused several times; in this case always use new seals on the filter and handle plug.

### DANGER

#### Toxic, corrosive gases

The measuring gas led through the equipment can be hazardous when breathing or touching it.

- Check tightness of the measuring system before putting it into operation.
- Take care that harmful gases are exhausted to a safe place.
- Before maintenance turn off the gas supply and make sure that it cannot be turned on unintentionally.
- Protect yourself during maintenance against toxic / corrosive gases. Use suitable protective equipment.

### DANGER

#### Explosion hazard due to high liquid temperatures

Hot steam and hot sample gas cause in a high probe surface temperature. The highest fluid temperature is approximately the maximum probe surface temperature.

- Always ensure a safety clearance of at least 20 K between the fluid temperature (steam, sample gas) and ignition temperature of explosive atmosphere (by measuring and monitoring the temperature).
- Also be sure to stay well below the smouldering temperatures of dust.
- Observe the relevant requirements in standards regarding the max. permissible surface temperature and ignition temperature of explosive atmosphere.

### 6.1.1 Replacing the upstream filter

The probes are equipped with an upstream filter which is always inside the process stream. The filter is suitable for blowback with compressed air (inert gas), i.e. blowing air (inert gas) through the filter from the inside to the outside to remove adhering particles. When sampling flammable gases, nitrogen (inert gas) must be used for blowback. Blowback of explosive gases is prohibited.

The effectiveness of cleaning a filter within a process is directly influenced by the available airflow (amount of gas). We therefore recommend using a pressure vessel directly on the probe.

With sufficient upstream filter blowback (within the process stream) the probes are maintenance-free. However, due to process conditions the filter may clog over time. In this case the filter element will need to be replaced.

Proceed as follows:

- Slightly push in the handle at the back of the probe and turn 90° (handle must then be horizontal) and remove.
- Screw the dirty filter element out of the handle.
- Check the sealing faces on the handle, replace O-rings, then install the filter element and new seal. (The spare filter includes O-rings and seals).
- Then insert the handle with the new or cleaned filter, push in slightly and turn 90° (handle must then be vertical). Pull on the handle to verify the filter element is firmly seated.

### NOTICE

The weather hood can only be closed again when the handle is completely vertical. In order to do so, loosen the hood from the locking supports by lifting slightly and then fold down. Ensure that the hood lock clicks into place correctly.

## Condensate inside the pressure vessel

Depending on the installation site and application conditions a small amount of condensate may form inside the blowback air pressure vessel. Open the drain screw at the bottom of the vessel and drain the condensate at least once a year.

If the probe needs to be serviced more frequently due to operating conditions, we recommend also draining the condensate at these intervals.

### CAUTION

#### High pressure

Pressure vessel under pressure.  
Before opening the condensate drain, close the air supply to the blowback control and drain the vessel by manual blowback.  
Pressing the main switch for the blowback control to interrupt the voltage supply.

## 6.2 Blowback of the in-situ filter (within the process stream)

### DANGER

#### Adiabatic compression during gas blowback (explosion hazard)!

Adiabatic compression may cause high gas temperatures and must be checked by the user.

Gas blowback may result in high gas temperatures due to adiabatic compression. This can cause flammable gases to ignite spontaneously.

- a) Blowback of explosive atmosphere / gases is prohibited.
- b) Flammable atmosphere / gases (non-explosive) may only be blown back with nitrogen (inert gas).

Be sure to use filtered air with a minimum rating of PNEUROP / ISO Class 4 for blowback:

Class	Particles / m <sup>3</sup> Particle size: (1 to 5) µm	Pressure dew point [°C]	Residual oil content [mg / m <sup>3</sup> ]
4	to 1000 (no particles ≥ 15 µm)	≤ 3	≤ 5

### 6.2.1 Manual Blowback (Without Blowback Control)

The shut-off valve in the air supply (inert gas supply) to the pressure vessel must be open. The optional pressure gauge on the pressure vessel shows the current operating pressure.

- To blowback, first close the shut-off valve in the gas probe (handle below the probe/weather hood).
- Then **abruptly** open the ball valve inside the connecting line from the pressure vessel to the probe until the display on the pressure gauge has dropped to the lowest reading.
- After blowback, close the ball valve and open the shut-off valve in the probe.

### 6.2.2 Automatic Blowback (External Blowback Control)

For automatic blowback, the shut-off valve in the probe with must have a pneumatic control (optional). The control unit for the system is designed for sequential valve control, i.e.:

1. Close the shut-off valve in the probe using the pneumatic control.
2. Open the solenoid valve between the pressure vessel and probe for approx. 10 seconds.
3. Open the shut-off valve in the probe.

Blowback can also be set as a closed process at intervals ranging from several minutes to hours or even days based on requirements.

## 6.3 Maintenance Schedule

### NOTICE

When using the probe in explosive areas the maintenance schedule must be observed!

### Maintenance schedule for normal ambient conditions:

Component	Interval in operating hours	Work to be performed	To be performed by
Entire probe	every 8000 h	<ul style="list-style-type: none"> <li>– Check gas connections</li> <li>– Proper function, dirt.</li> </ul> If damaged, replace or have repaired by Bühler.	Operator
Entire probe	based on dust level (layer must be < 3 mm)	<ul style="list-style-type: none"> <li>– Remove dust.</li> </ul>	Operator
Filter	every 8,000 h	<ul style="list-style-type: none"> <li>– Check dirt level of filter.</li> </ul>	Operator
Seals	every 8,000 h	<ul style="list-style-type: none"> <li>– Replace O-rings.</li> <li>– Replace seals after every filter change.</li> </ul>	Operator
Entire probe	after 20,000 h or 3 years	Inspection by Bühler	Service technician/Bühler

## 7 Service and repair

This chapter contains information on troubleshooting and correction should an error occur during operation.

Repairs to the unit must be performed by Bühler authorised personnel.

Please contact our Service Department with any questions:

**Tel.: +49-(0)2102-498955** or your agent

If the equipment is not functioning properly after correcting any malfunctions and switching on the power, it must be inspected by the manufacturer. Please send the equipment inside suitable packaging to:

**Bühler Technologies GmbH**

**- Reparatur/Service -**

**Harkortstraße 29**

**40880 Ratingen**

**Germany**

Please also attach the completed and signed RMA decontamination statement to the packaging. We will otherwise be unable to process your repair order.

You will find the form in the appendix of these instructions, or simply request it by e-mail:

**service@buehler-technologies.com.**

### 7.1 Troubleshooting

#### CAUTION

#### Risk due to defective device

Personal injury or damage to property

- a) Switch off the device and disconnect it from the mains.
- b) Repair the fault immediately. The device should not be turned on again before elimination of the failure.

Problem / Malfunction	Possible cause	Action
No or reduced gas flow	– Filter element clogged	– Clean or replace filter element
	– Gas circuit clogged	– Clean sampling tube
	– Ball valve closed	– Open ball valve
	– Blowback (optional) not responding	– Check compressed air supply
		– Check solenoid valve, check pneumatic control

Tab. 2: Troubleshooting

### 7.2 Spare Parts and Accessories

Please also specify the model and serial number when ordering parts.

Upgrade and expansion parts can be found in our catalog.

Available spare parts:

Item no.	Description
90 090 79	Flange seal DN65 PN6
46 222 351 5	O-ring kit for filter element and probe, material: Viton/Cu
	Please refer to the accessories data sheet in the appendix for filter elements

## 8 Disposal

The applicable national laws must be observed when disposing of the products. Disposal must not result in a danger to health and environment.

The crossed out wheelee bin symbol on Bühler Technologies GmbH electrical and electronic products indicates special disposal notices within the European Union (EU).

The crossed out wheelee bin symbol indicates the electric and electronic products bearing the symbol must be disposed of separate from household waste. They must be properly disposed of as waste electrical and electronic equipment.

Bühler Technologies GmbH will gladly dispose of your device bearing this mark. Please send your device to the address below for this purpose.

We are obligated by law to protect our employees from hazards posed by contaminated devices. Therefore please understand that we can only dispose of your waste equipment if the device is free from any aggressive, corrosive or other operating fluids dangerous to health or environment. **Please complete the "RMA Form and Decontamination Statement", available on our website, for every waste electrical and electronic equipment. The form must be applied to the packaging so it is visible from the outside.**

Please return waste electrical and electronic equipment to the following address:

Bühler Technologies GmbH  
WEEE

# UK Declaration of Conformity

The manufacturer Bühler Technologies GmbH declares, under the sole responsibility, that the product complies with the requirements of the following UK legislation:

## Electrical Equipment Safety Regulations 2016

The following legislation were regarded:

## Electromagnetic Compatibility Regulations 2016

**Product:** Sample gas probe with blowback vessel  
**Types:** GAS 222.10  
GAS 222.11  
GAS 222.20 DH  
GAS 222.30  
GAS 222.35-U

The equipment of this series is designed for installation in gas analysing systems. They are very important components in a sample conditioning system.

The object of the declaration described above is in conformity with the relevant designated standards:

**EN 61010-1:2010/A1:2019/AC:2019-04**  
**EN 80079-36**  
**EN 80079-37**

**EN 61326-1:2013**  
**EN 1127-1:2019**

## Herstellereklärung Manufacture Declaration

Hiermit erklärt Bühler Technologies GmbH,  
dass die nachfolgenden Produkte den  
wesentlichen Anforderungen der Richtlinie

*Herewith declares Bühler Technologies GmbH  
that the following products correspond to the  
essential requirements of Directive*

**2014/34/EU  
(Atex)**

über Explosionsschutz in ihrer aktuellen  
Fassung entsprechen.

*about explosive atmospheres in its actual  
version.*

**Produkt / products:** Messgassonde / *sample gas probe*  
**Typ / type:** GAS 222.xx, 10, 11, 20 DH, 30, 35-U

Gasentnahmesonden sind zum Einbau in Gasanalysesystemen bestimmt.

Durch die Gasentnahmesonden **GAS 222.xx** können nichtbrennbare Gase und brennbare Gase (die im Normalbetrieb gelegentlich explosiv sein können (Zone 1) geleitet werden. Das Rückspülen explosiver Gase ist nicht gestattet. Das Rückspülen brennbarer Gase darf nur mit Inertgas erfolgen. Die Sonden dürfen nur durch Fachpersonal installiert werden; die einschlägigen Sicherheitsvorschriften sind zwingend zu beachten. Die Grundversion der Sonden ist für den Einsatz in explosionsgefährdeten Bereichen der **Zone 1 oder Zone 21** geeignet. Je nach gewähltem Zubehör (z.B. Anbauteile wie Magnetventile, beheizter Rückspülbehälter...) kann der zugelassene Einsatzbereich stark eingeschränkt sein. Bei Verwendung von **Kategorie 3G oder 3D Zubehör** ist der Einsatzbereich der Sonden auf die **Zone 2 oder Zone 22** beschränkt. Beachten Sie daher unbedingt die Typenschilder aller Anbauteile (Insbesondere die Zündschutzkennzeichnung und die Hinweise in den Bedienungsanleitungen.

*Sample gas probes are intended for installation in gas-analysis systems.*

*Inflammable gases and flammable gases (only temporary explosive in normal operation; zone 1) can be led through the sample gas probes. Blow back to explosive gas is not allowed. Blowback of flammable gas is only allowed with inert gas. Sample gas probes have to be installed by trained personnel. All safety regulations have to be fulfilled. All basic versions of the sample gas probes can be used in **zone 1** (explosive gas atmosphere) or in **zone 21** (explosive dust atmosphere). Depending on the accessories, the range of use may be restricted. Sample gas probes with **category 3G or 3D accessories** (e.g. magnetic valve, blowback vessel...) must be used only in **zone 2 or zone 22**. Therefore note the Ex-designation on the type plates of the accessories. Note also all indications in the instruction manuals.*

Das oben beschriebene Produkt der Erklärung erfüllt die einschlägigen  
Harmonisierungsrechtsvorschriften der Union:

*The object of the declaration described above is in conformity with the relevant Union harmonisation  
legislation:*

**EN ISO 80079-36:2016**

## Manufacturer Declaration

Herewith Bühler Technologies GmbH declares that the following products are not „equipment” for the purpose of legislation **Equipment and Protective Systems Intended for Use in Potentially Explosive Atmospheres Regulations 2016** respectively, and therefore are not labelled with the UKCA mark.

**Product:** Sample gas probe  
**Types:** GAS 222.xx, 10, 11, 20 DH, 30, 35-U

This declaration is valid for all devices manufactured in accordance with the manufacturing documents deposited with the manufacturer – which form an integral part of this declaration.

Sample gas probes are intended for installation in gas-analysis systems. Inflammable gases and flammable gases (only temporary explosive in normal operation; zone 1) can led through the sample gas probes. Blow back to explosive gas is not allowed. Blowback of flammable gas is only allowed with inert gas. Sample gas probes have to be installed by trained personnel. All safety regulations have to be fulfilled. All basic versions of the sample gas probes can be used in zone 1 (explosive gas atmosphere) or in zone 21 (explosive dust atmosphere). Depending on the accessories, the range of use may be restricted. Sample gas probes with category 3G or 3D accessories (e.g. magnetic valve, blowback vessel...) must be used only in zone 2 or zone 22. Therefore note the Ex-designation on the type plates of the accessories. Note also all indications in the instruction manuals.

The object of the declaration described above is in conformity with the relevant designated standards:

**EN ISO 80079-36:2016**  
**EN 1127-1:2019**

**EN ISO 80079-37:2016**

This declaration of manufacture is issued under the sole responsibility of the manufacturer.

# Accessories for Sample Gas Probe GAS 222

- Sample tubes
- In-situ filters
- Extensions
- Downstream filters
- Cal gas connections
- Adapter flanges
- Capacitive vessel
- Pneumatic actuators
- 3/2-way-solenoid valves
- Blowback controllers

Page 2 - 4

Page 8

Page 5 - 7

For general information, see data sheet "Sample gas probes GAS 222" DE461000.

\*max. pressure 6 bar

## **Details:**

### **A) Blowback**

#### **Ordering note for capacitive vessel:**

For attachment to GAS 222.11 / 30 / 35-U, a support is required.

#### **Ordering note for pneumatic actuator:**

If a blowback controller is required, only actuator P/N 46222030 is possible.

We advise the installation of a position indicator switch to control the pneumatic actuator.

### **Integrated blowback controller in the probe controller**

In addition to the stand-alone blowback controller (RRS), an integrated blowback controller is optionally available

Blowback cycle time and actual blowback time can be adjusted via the keys and menu of the controller. The blowback and manual operation will be shown on the display. The blowback controller can be programmed via the keys – manual or automatic operation is possible. Besides the status output of the controller, a blowback status signal is provided. Blowback will be usually initiated by signals coming from the main controls.

If the position indicator switch is installed, the controller will use this input for the process logic.

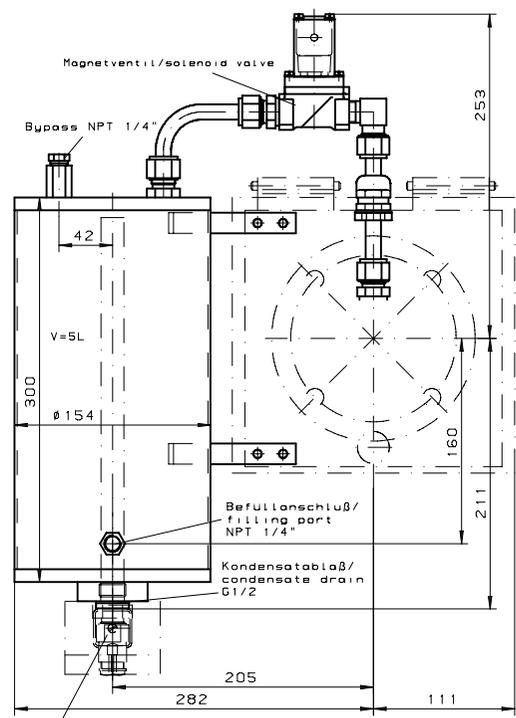

### **B) Hazardous Areas**

Please note that installed accessories may change the approved category of the probe. Follow strictly the advices given in the installation- and operation manual and regard the marking on the type plate.

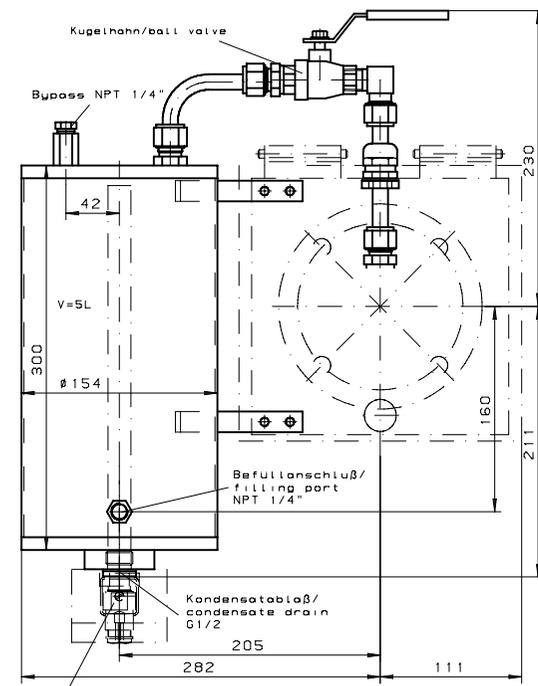

<b>Sample Gas Probe GAS 222.xx Atex</b>		
<b>Model</b>	<b>with Accessories</b>	<b>resulting restricted area; marking</b>
21 Atex, 31 Atex, 35 Atex	Pressure vessel PAV 01 (Part-No. 46222PAV with accessories)	II 1D / 2GD
21 Atex, 31 Atex,	In situ filter*, ceramics (Art.-Nr.:46222307 + 46222307F)	II 1D 3G / 2GD

# RMA-Formular und Erklärung über Dekontaminierung

## RMA-Form and explanation for decontamination

RMA-Nr./ RMA-No.

Die RMA-Nr. bekommen Sie von Ihrem Ansprechpartner im Vertrieb oder Service. Bei Rücksendung eines Altgeräts zur Entsorgung tragen Sie bitte in das Feld der RMA-Nr. "WEEE" ein./ You may obtain the RMA number from your sales or service representative. When returning an old appliance for disposal, please enter "WEEE" in the RMA number box.

Zu diesem Rücksendeschein gehört eine Dekontaminierungserklärung. Die gesetzlichen Vorschriften schreiben vor, dass Sie uns diese Dekontaminierungserklärung ausgefüllt und unterschrieben zurücksenden müssen. Bitte füllen Sie auch diese im Sinne der Gesundheit unserer Mitarbeiter vollständig aus./ This return form includes a decontamination statement. The law requires you to submit this completed and signed decontamination statement to us. Please complete the entire form, also in the interest of our employee health.

### Vermeiden von Veränderung und Beschädigung der einzusendenden Baugruppe

Die Analyse defekter Baugruppen ist ein wesentlicher Bestandteil der Qualitätssicherung der Firma Bühler Technologies GmbH. Um eine aussagekräftige Analyse zu gewährleisten muss die Ware möglichst unverändert untersucht werden. Es dürfen keine Veränderungen oder weitere Beschädigungen auftreten, die Ursachen verdecken oder eine Analyse unmöglich machen.

### Umgang mit elektrostatisch sensiblen Baugruppen

Bei elektronischen Baugruppen kann es sich um elektrostatisch sensible Baugruppen handeln. Es ist darauf zu achten, diese Baugruppen ESD-gerecht zu behandeln. Nach Möglichkeit sollten die Baugruppen an einem ESD-gerechten Arbeitsplatz getauscht werden. Ist dies nicht möglich sollten ESD-gerechte Maßnahmen beim Austausch getroffen werden. Der Transport darf nur in ESD-gerechten Behältnissen durchgeführt werden. Die Verpackung der Baugruppen muss ESD-konform sein. Verwenden Sie nach Möglichkeit die Verpackung des Ersatzteils oder wählen Sie selber eine ESD-gerechte Verpackung.

### Einbau von Ersatzteilen

Beachten Sie beim Einbau des Ersatzteils die gleichen Vorgaben wie oben beschrieben. Achten Sie auf die ordnungsgemäße Montage des Bauteils und aller Komponenten. Versetzen Sie vor der Inbetriebnahme die Verkabelung wieder in den ursprünglichen Zustand. Fragen Sie im Zweifel beim Hersteller nach weiteren Informationen.

### Einsenden von Elektroaltgeräten zur Entsorgung

Wollen Sie ein von Bühler Technologies GmbH stammendes Elektroprodukt zur fachgerechten Entsorgung einsenden, dann tragen Sie bitte in das Feld der RMA-Nr. „WEEE“ ein. Legen Sie dem Altgerät die vollständig ausgefüllte Dekontaminierungserklärung für den Transport von außen sichtbar bei. Weitere Informationen zur Entsorgung von Elektroaltgeräten finden Sie auf der Webseite unseres Unternehmens.

### Avoiding alterations and damage to the components to be returned

Analysing defective assemblies is an essential part of quality assurance at Bühler Technologies GmbH. To ensure conclusive analysis the goods must be inspected unaltered, if possible. Modifications or other damages which may hide the cause or render it impossible to analyse are prohibited.

### Handling electrostatically conductive components

Electronic assemblies may be sensitive to static electricity. Be sure to handle these assemblies in an ESD-safe manner. Where possible, the assemblies should be replaced in an ESD-safe location. If unable to do so, take ESD-safe precautions when replacing these. Must be transported in ESD-safe containers. The packaging of the assemblies must be ESD-safe. If possible, use the packaging of the spare part or use ESD-safe packaging.

### Fitting of spare parts

Observe the above specifications when installing the spare part. Ensure the part and all components are properly installed. Return the cables to the original state before putting into service. When in doubt, contact the manufacturer for additional information.

### Returning old electrical appliances for disposal

If you wish to return an electrical product from Bühler Technologies GmbH for proper disposal, please enter "WEEE" in the RMA number box. Please attach the fully completed decontamination declaration form for transport to the old appliance so that it is visible from the outside. You can find more information on the disposal of old electrical appliances on our company's website.
