Heated sample gas line

Installation and Operation Instructions

Original instructions
Read this instruction carefully prior to installation and/or use. Pay attention particularly to all advises and safety instructions to prevent injuries. Bühler Technologies can not be held responsible for misusing the product or unreliable function due to unauthorised modifications.

1 Introduction

1.1 Intended Use
The heated sample gas line is intended for use in gas analysis systems in industrial applications.
– Before using the device, verify the listed technical data meet the application parameters.
– Further check if all contents are complete.
Please refer to the type plate to identify your model. In addition to the job number it also contains the item number:
When connecting, please note the specific values of the device, and the correct versions when ordering spare parts.
When using the heated sample gas line for a different purpose than originally intended, please consult our technical advisers to determine if it is suitable for the application.
Unauthorized misappropriation is prohibited. Any modification to the heated sample gas line will compromise operating safety and automatically void the manufacturer warranty.

1.2 Product Description
The principle behind the heated sample gas line is the inner tube the medium flows through. It is made from high quality PTFE and has a smooth surface. Since the pressure resistance of the PTFE inner tube is not particularly high it is wrapped with stainless steel wires, i.e. the medium pressure version has one, the high pressure version has two stainless steel reinforcements. The built-in fitting are crimped together with the tube body at a predefined pressure-time ratio.
The heater consists of high quality heat conductor compositions made from different insulating materials based on the temperature. Heat insulation is adapted to the temperature range and the type of heated sample gas line, with temperature-resistant caps at both ends. The entire heated sample gas line is designed so the overall affect on the flexibility of the pressure hose or the pipe is negligible.

Notice
Minimum bend radii, operating temperature
Depending on the length or nominal cross-section of the heated sample gas lines, suitable minimum bend radii are required. The max. operating temperatures are specified in the type plate and must never be exceeded in any area. Suitable control equipment must be used to regulate the temperature.

The heated sample gas line can be used for a variety of applications. The application can be:
– Frost protection purposes, e.g. -20 °C (-4 °F)
– Maintaining the temperature,
– Increasing the temperature to max. 200 °C (392 °F)
Be sure to observe the limits specified in the technical data. Suitable temperature control devices (regulator/cut-out) must be used to avoid exceeding the max. medium temperature. The heat output varies by length and cross-section.

Notice
Temperature control
Different ambient temperatures around the tube will result in different internal temperatures. The ambient temperature where the sensor is located is critical in temperature control and should be around the max. ambient temperature to prevent overheating.

1.3 Scope of Delivery
– Heated sample gas line
– Product Documentation
Attached and included accessories are listed separately in the order.
1.4 Ordering Instructions

2 Safety instructions

2.1 Important advice

Operation of the device is only valid if:

– the product is used under the conditions described in the installation- and operation instruction, the intended application according to the type plate and the intended use. In case of unauthorized modifications done by the user Bühler Technologies GmbH can not be held responsible for any damage,
– when complying with the specifications and markings on the nameplates.
– the performance limits given in the datasheets and in the installation- and operation instruction are obeyed,
– monitoring devices and safety devices are installed properly,
– service and repair is carried out by Bühler Technologies GmbH,
– only original spare parts are used.

This manual is part of the equipment. The manufacturer keeps the right to modify specifications without advanced notice. Keep this manual for later use.

Signal words for warnings

<table>
<thead>
<tr>
<th>Signal word</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DANGER</td>
<td>Signal word for an imminent danger with high risk, resulting in severe injuries or death if not avoided.</td>
</tr>
<tr>
<td>WARNING</td>
<td>Signal word for a hazardous situation with medium risk, possibly resulting in severe injuries or death if not avoided.</td>
</tr>
<tr>
<td>CAUTION</td>
<td>Signal word for a hazardous situation with low risk, resulting in damaged to the device or the property or minor or medium injuries if not avoided.</td>
</tr>
<tr>
<td>NOTICE</td>
<td>Signal word for important information to the product.</td>
</tr>
</tbody>
</table>

Warning signs

In this manual, the following warning signs are used:

- Warning against hazardous situations
- Warning against electrical voltage
- Warning against respiration of toxic gases
- Warning against acid and corrosive substances
- Warning against potentially explosive atmospheres
- Warning against hot surface

- General notice
- Disconnect from mains
- Wear respirator
- Wear eye/face protection
- Wear protection gloves
2.2 General hazard warnings

The equipment must be installed by a professional familiar with the safety requirements and risks. Be sure to observe the safety regulations and generally applicable rules of technology relevant for the installation site. Prevent malfunctions and avoid personal injuries and property damage.

**The operator of the system must ensure:**
- Safety notices and operating instructions are available and observed,
- The respective national accident prevention regulations are observed,
- The permissible data and operational conditions are maintained,
- Safety guards are used and mandatory maintenance is performed,
- Legal regulations are observed during disposal.

**Maintenance, Repair**

Please note during maintenance and repairs:
- Repairs to the unit must be performed by Bühler authorised personnel.
- Only perform conversion-, maintenance or installation work described in these operating and installation instructions.
- Always use genuine spare parts.

Always observe the applicable safety and operating regulations in the respective country of use when performing any type of maintenance.

### DANGER Electrical voltage

**Electrocution hazard.**

a) Disconnect the device from power supply.
b) Make sure that the equipment cannot be reconnected to mains unintentionally.
c) The device must be opened by trained staff only.
d) Regard correct mains voltage.

### DANGER Toxic, corrosive gases

The measuring gas led through the equipment can be hazardous when breathing or touching it.

a) Check tightness of the measuring system before putting it into operation.
b) Take care that harmful gases are exhausted to a save place.
c) Before maintenance turn off the gas supply and make sure that it cannot be turned on unintentionally.
d) Protect yourself during maintenance against toxic / corrosive gases. Use suitable protective equipment.

### DANGER Potentially explosive atmosphere

**Explosion hazard if used in hazardous areas.**

The device is not suitable for operation in hazardous areas with potentially explosive atmospheres.

Do not expose the device to combustible or explosive gas mixtures.
3 Transport and storage

Only transport the product inside the original packaging or a suitable alternative. The equipment must be protected from moisture and heat when not in use. They must be stored in a covered, dry and dust-free room at a temperature between -20 °C to 50 °C (-4 °F to 122 °F).
4 Installation and connection

4.1 Assembly Instructions

1. Check the type plate specifications prior to installation: Do the type, version, voltage, output, and operating temperature meet your requirements?

2. Visually inspect: Is this the version you ordered? When in doubt, check the documents. Does the heated sample gas line meet the requirements at the job site?

3. If the heated sample gas line is secured with brackets, pressing on it must not reduce the outside diameter by more than 10 %. Exceeding the 10 % limit may damage the heating conductor, control lines, and sensor leads.

4. If there are control wires inside the heated sample gas line, please note the electrical power rating of these wires. The standard cross-section is 0.75 mm².

5. Always use suitable temperature control devices. The controller output, sensor type, and temperature range must match.

6. Be sure to connect the heated sample gas line to a controller with the respective specifications. An inverted sensor allows the heated sample gas line to heat until it is destroyed.

7. When installed outdoors, the heated sample gas line must be protected from the wind, as this could cool it and potentially prevent it from reaching the target temperature. It further should not be exposed to rain or direct sunlight for extended periods. It must be protected by a suitable cover.

8. Do not pull the heated sample gas line by the fittings. All fittings will withstand pressure but are susceptible to pulling.

9. Do not pull the heated sample gas line by the connection cable.

10. Please note the specific requirements at the job site.

11. Verify if the materials in contact with the medium are resistant to or withstand the mediums to be heated (> see Technical Data).

12. Check if surrounding objects, system components or other items can damage or impair the function of the heated sample gas line and clear or remove these.

13. Conductive, exposed parts must be included in potential equalisation.

We recommend using an I, < 30 mA residual-current-operated protective device RCD (ELCB).

---

**NOTICE**

**Minimum bend radii, operating temperature**

Depending on the length or nominal cross-section of the heated sample gas lines, suitable minimum bend radii are required. The max. operating temperatures are specified in the type plate and must never be exceeded in any area. Suitable control equipment must be used to regulate the temperature.

Generally: Minimum bend radius > 5 x tube diameter. Other bend radii available upon request.
### 4.1.1 Connecting the heated sample gas line

<table>
<thead>
<tr>
<th></th>
<th>Assembly Drawing</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td><img src="image" alt="Wrong" /> <img src="image" alt="Correct" /></td>
<td>If the heated sample gas line is too short, the connecting ends may kink. Plan for a straight piece (5 x tube diameter) at the connecting ends. A higher bend radius will extend the life.</td>
</tr>
<tr>
<td>2</td>
<td><img src="image" alt="Wrong" /> <img src="image" alt="Correct" /></td>
<td>Unfavourable installation allows the heated sample gas line to sag. Supports or reels with counterweight.</td>
</tr>
<tr>
<td>3</td>
<td><img src="image" alt="Wrong" /> <img src="image" alt="Correct" /></td>
<td>On rolled heated sample gas lines stain at the ends will cause torsional stress and the bend radii will be below the minimum. Unroll line, do not pull off. Observe the minimum bend radii (5 x tube diameter).</td>
</tr>
<tr>
<td>4</td>
<td><img src="image" alt="Wrong" /> <img src="image" alt="Correct" /></td>
<td>Compression along the centre line due to incorrect installation or movement reduces the pressure resistance. Expansion compensation with built-in lines will destroy the lines. Bend at connections.</td>
</tr>
<tr>
<td>5</td>
<td><img src="image" alt="Wrong" /> <img src="image" alt="Correct" /></td>
<td>Torsion movement will destroy the heated sample gas line. This is often due to incorrect installation, particularly twisting the line during assembly. Be sure the line axes are parallel and movement is plane. Use a locking key during assembly to prevent the heated sample gas line from twisting.</td>
</tr>
</tbody>
</table>

4.2 Electrical connections

**WARNING**  
**Hazardous electrical voltage**  
The device must be installed by trained staff only.

**CAUTION**  
**Wrong mains voltage**  
Wrong mains voltage may damage the device.  
Regard the correct mains voltage as given on the type plate.

The operator must install an external separator for the device which is clearly assigned to this device. A separator (main switch) with min. 3 mm contact operating and a fuse suitable for the conductor cross-section, max. 16 A or 20 A, suitable for the voltage must be installed at the site for this purpose. Perform a detailed root cause analysis.

**Electric strength test**  
(Repeat) tests of the electric strength must be performed at 1 kV for stationary systems, or 1.5 kV for mobile applications. The insulation resistance must be > 20 MΩ.

4.2.1 Self-regulating lines  
The line has a heater with fixed output and may therefore be connected to a 115 V AC or 230 V AC power supply (see type plate).

4.2.2 Controllable lines  
The line has a regulated, adjustable heater. The supply voltage is 115 V AC, 50/60Hz or 230 V AC, 50/60 Hz (see type plate).  
If the heat dissipation is very high near the heated sample gas line due to the application, install an appropriate shield provided by the customer to protect the heated sample gas line and regulator.

4.2.3 Connector pin assignment (optional)

5 Operation and Control

### NOTICE

The device must not be operated beyond its specifications.

#### 5.1 Operating the heated sample gas line

**NOTICE**

**Geometric arrangement during operation**

Never operate the heated sample gas line rolled up or stacked. The outer sheath (corrugated tube) may otherwise be destroyed!

1. Closely monitor the initial heat-up phase to detect any faults early and take safeguards if necessary. Monitor further operation of the heated sample gas line.
2. Be sure the medium at the entry or inlet point does not exceed the max. temperature of the heated sample gas line. The heated sample gas line may otherwise be damaged in these areas.
3. Avoid extreme shock or movement whilst operating the heated sample gas line (shaking, vibration, etc.).
4. Never pull the heated sample gas line by the fitting, as all fittings will withstand pressure but are fragile when pulled.
5. A fitting may clog due to the medium solidifying and only clear again after heating up for some time. Never use external heat (e.g. torch, etc.) to attempt to reduce the time. This will damage the heated sample gas line!
6. If you notice damage or abnormal function of the heated sample gas line during operation, switch off and disconnect from the mains as quickly as possible.
7. Avoid exposing the heated sample gas line to direct sunlight for extended periods, or protect if this cannot be avoided.
6 Maintenance

During maintenance, remember:
– The equipment must be maintained by a professional familiar with the safety requirements and risks.
– Only perform maintenance work described in these operating and installation instructions.
– When performing maintenance of any type, observe the respective safety and operation regulations.

**DANGER**

**Electrical voltage**
Electrocution hazard.

a) Disconnect the device from power supply.
b) Make sure that the equipment cannot be reconnected to mains unintentionally.
c) The device must be opened by trained staff only.
d) Regard correct mains voltage.

**DANGER**

**The gas inside the filter, condensate and used filter elements may be caustic or corrosive.**

Sample gas can be harmful.

a) Before maintenance turn off the gas supply and surge with air if necessary.
b) Exhaust sample gas to a safe place.
c) Protect yourself against toxic / corrosive gas during maintenance. Wear appropriate personal protection equipment.

**CAUTION**

**Hot surface**
Risk of burns
Depending on the operating parameters, the housing temperature may reach over 100 °C during operation.
Allow the unit to cool down before performing maintenance.

**CAUTION**

**Excess pressure**
The unit mustn’t be pressurised or energised when opened.
If necessary, close the gas supply and ensure a safe pressure on the process end before opening.

### 6.1 Heated Sample Gas Line Maintenance

1. If the outside of the heated sample gas line or the supply cable show defects, disconnect mains immediately, removed, and sent to the factory for inspection. Never open the heated sample gas line or components thereof unauthorised.
2. The heated sample gas line should be regularly inspected or serviced, at least every 6 months, by an electrically skilled person using suitable measuring and testing equipment to ensure operational safety. The inspection intervals must be adapted to the operating conditions on site.
3. If a limiter permanently switches off, analyse the cause prior to restarting and take suitable measures to prevent future occurrences.
4. The life of the heated sample gas line varies by application conditions. With rough operation this is shorter than with occasional use in optimal conditions.
7 Service and repair

This chapter contains information on troubleshooting and correction should an error occur during operation.

Repairs to the unit must be performed by Bühler authorised personnel.

Please contact our Service Department with any questions:

Tel.: +49-(0)2102-498955 or your agent

If the equipment is not functioning properly after correcting any malfunctions and switching on the power, it must be inspected by the manufacturer. Please send the equipment inside suitable packaging to:

Bühler Technologies GmbH
- Reparatur/Service -
Harkortstraße 29
40880 Ratingen
Germany

Please also attach the completed and signed RMA decontamination statement to the packaging. We will otherwise be unable to process your repair order.

You will find the form in the appendix of these instructions, or simply request it by e-mail:

service@buehler-technologies.com

7.1 Troubleshooting

**CAUTION**

Risk due to defective device

Personal injury or damage to property

a) Switch off the device and disconnect it from the mains.

b) Repair the fault immediately. The device should not be turned on again before elimination of the failure.

9.3 Dimensions

Schematic heated line construction. The Pt100 only is only installed standard in the controllable line.
9.4 Helpful accessories for connecting heated lines

A suitable connection between heated lines requires thermal insulation or active heating between the unheated ends. Silicone foam insulating sleeves are available for this purpose. If passive insulation is inadequate, you may choose a self-regulating transitional heater.

**Insulating Sleeve**

**Technical Data - Insulating Sleeve**

9.5 Compressive strength

9.5.1 Medium pressure

**CAUTION Medium pressure**

The compressive strength of flexible heated sample gas lines vary in different working temperatures. Please note the values in the table below.

Within the range up to 200 °C the load can be defined, but from 250 °C on it drops to 0 bar. Between these temperatures the pressure should be calculated carefully depending on the strain, using a correction factor of 0.7 for every 24 °C. Pay attention to pressure peaks. These can be very high and are not included in normal pressure readouts. Never exceed the operating pressure.

– Declaration of Conformity KX400001
– RMA - Decontamination Statement
EU-Konformitätserklärung
EU-declaration of conformity

Hiermit erklärt Bühler Technologies GmbH, dass die nachfolgenden Produkte den wesentlichen Anforderungen der Richtlinie in ihrer aktuellen Fassung entsprechen.

Folgende Richtlinie wurde berücksichtigt:

2014/35/EU
(Niederspannungsrichtlinie / low voltage directive)

in its actual version.
The following directive was regarded:

2014/30/EU (EMV/EMC)

Produkt / products: Beheizte Messgasleitung / Heated sample gas line
Seriennummer / serial number: 48 5XXX XXXXX (X = 0-9)

Das Betriebsmittel dient zum Betrieb in Gasanalysensystemen.
The equipment is intended for use in gas-analysis systems.

Das oben beschriebene Produkt der Erklärung erfüllt die einschlägigen Harmonisierungsrechtsvorschriften der Union:
The object of the declaration described above is in conformity with the relevant Union harmonisation legislation:

EN 60398:2015
EN 60519-1:2011

Die alleinige Verantwortung für die Ausstellung dieser Konformitätserklärung trägt der Hersteller.
This declaration of conformity is issued under the sole responsibility of the manufacturer.

Dokumentationsverantwortlicher für diese Konformitätserklärung ist Herr Stefan Eschweiler mit Anschrift am Firmensitz.
The person authorized to compile the technical file is Mr. Stefan Eschweiler located at the company’s address.

Ratingen, den 25.04.2017

Um eine schnelle und reibungslose Bearbeitung Ihres Anliegens zu erreichen, füllen Sie bitte diesen Rücksendeschein aus. Eine genaue Fehlerbeschreibung ist für die Ursachenanalyse nötig und hilft bei der schnellen Bearbeitung des Vorgangs. Die Aussage „Defekt“ hilft bei der Fehlersuche leider nicht.

Bringen Sie den Rücksendeschein mit der Dekontaminierungserklärung bitte zusammen mit den Versandpapieren in einer Klarsichthülle außen an der Verpackung an. Ansonsten ist eine Bearbeitung Ihres Reparaturauftrages nicht möglich!

</table>

Ich bestätige hiermit, dass das oben spezifizierte Gerät ordnungsgemäß gereinigt und dekontaminiert wurde und keinerlei Gefahren im Umgang mit dem Produkt bestehen.

In other cases, please describe the hazards in detail:

Aggregatzustand (bitte ankreuzen):
- Flüssig / Liquid
- Fest / Solid
- Pulvrig / Powdery
- Gasförmig / Gaseous

Please note the following warnings (please check):

<table>
<thead>
<tr>
<th>Explosiv / Explosive</th>
<th>Giftig / Tödlich / Toxic / lethal</th>
<th>Entzündliche Stoffe / Flammable substances</th>
<th>Brandfördernd / Oxidizing</th>
