Sample gas pumps

P1.2, P1.2E

Installation and Operation Instructions

Original instructions
Read this instruction carefully prior to installation and/or use. Pay attention particularly to all advises and safety instructions to prevent injuries. Bühler Technologies can not be held responsible for misusing the product or unreliable function due to unauthorised modifications.

1 Introduction

1.1 Intended use

Model P1.2 sample gas pumps are intended for installation in sample gas conditioning systems for industrial applications outside of explosive atmospheres.

**DANGER**

Explosion hazard when used in explosive areas

Model P1.2 sample gas pumps are not suitable for use in explosive areas and may not be used in these.

The complete designation of the P1.2 sample gas pump is:

II 3G/- c IIB T4

The P1.2 sample gas pump may only be used to convey explosion class IIA and IIB flammable gaseous media which are not explosive during normal operation, as well as non-flammable gaseous media.

The maximum surface temperature varies by media and ambient temperatures. Please refer to chapter "Technical data [page 26]" for the correlation between the media temperature, ambient temperature and the pump’s temperature class. Flammable media must not be heated beyond these values. Please note, flammable gas must only be heated up to 80 % of its ignition temperature. The small of the two values is the maximum media temperature.

Gas sampling is generally **prohibited** if the gas flow results in a dangerous electrostatic charge in the bellow / pump body (also see chapter "Operation and control [page 14]").

The P1.2 sample gas pump is not suitable for liquids. It may be operated at an ambient temperature range from 0 °C to 50 °C. Outdoor installation and operation prohibited.

Please note the specifications in the data sheet on the specific intended use, existing material combinations, as well as pressure and temperature limits.
1.2 Item number structure

The device is delivered with different configurations. The part number given on the type plate informs you about the specific configuration of your device.

On the type plate you will find the order number as well as the 13-digit product key. This number is a code where each digit \(x\) describes a certain feature:

<table>

* PTFE or PVDF pump body only

** VA pump body only

If there are special instructions for a pump type, they are marked in the manual.

Take care of the limits of the pump. When ordering spare parts chose for the type matching part numbers (e.g. valves).

1.4 Scope of delivery

– 1 x Sample gas pump with motor
– Product documentation
– Connection- and mounting accessories (only optional)

For logistics reasons, connection- or mounting accessories such as screw-in connections and/or mounting bracket are not factory installed!

1.5 Product description

The sample gas pumps are intended exclusively for the pumping of gaseous media. They are not suitable for liquids.

Please observe the information at the end of these instructions in relation to specific intended use, available material combinations, and pressure and temperature limits. In addition, please observe the information and labelling on the identification plates.

The maximum surface temperature depends on the ambient temperature and the temperature of the medium. The connection between the temperature of the medium, the ambient temperature and the temperature class of the pump is specified in the technical data.

NOTICE

Limitations

The pumps P1.2 cannot convey flammable, gaseous media and flammable gaseous media which are probably not explosive during normal operation (sampling from zone 2).
Sampling gas from zone 2 is generally prohibited, if the gas flow results in a dangerous electrostatic charge in the bellow / pump body (also see chapter “Operation”).
The pumps P1.2 must not be used in dusty areas.
The equipment is not suitable for use in explosive areas!

Applications where sample gas is still moist, can result in condensation in the lines and the pump body. In these cases, the pump head must be suspended (see item “Conversion to pump body pointing down” [> page 10]).

NOTICE

Never use sample gas pumps outdoors!
2 Safety instructions

2.1 Important advice

This unit may only be used if:

– the product is being used under the conditions described in the operating- and system instructions, used according to the nameplate and for applications for which it is intended. Any unauthorized modifications of the device will void the warranty provided by Bühler Technologies GmbH,

– complying with the specifications and markings in the type plate,

– complying with the threshold values specified in the data sheet and the instructions,

– monitoring equipment / protection devices are connected correctly,

– service and repair work not described in these instructions are performed by Bühler Technologies GmbH,

– genuine spare parts are used.

These operating instructions are a part of the equipment. The manufacturer reserves the right to change performance-, specification- or technical data without prior notice. Please keep these instructions for future reference.

Signal words for warnings

</tr>
<tr>
<td><strong>CAUTION</strong></td>
<td>Signal word for a hazardous situation with low risk, resulting in damaged to the device or the property or minor or medium injuries if not avoided.</td>
</tr>
<tr>
<td><strong>NOTICE</strong></td>
<td>Signal word for important information to the product.</td>
</tr>
</tbody>
</table>

Warning signs

These instructions use the following warning signs:

- Warns of a general hazard
- Warns of limbs being crushed
- Warns of voltage
- General notice
- Warns not to inhale toxic gasses
- Unplug from mains
- Warns of corrosive liquids
- Wear respiratory equipment
- Warns of explosive areas
- Wear a safety mask
- Warns of hot surfaces
- Wear gloves
2.2 General hazard warnings

Installation into a complete system can pose new hazards on which the manufacturer of this sample gas pump has no bearing. If necessary, perform a risk assessment of the complete system this product will be installed into.

When configuring and building the complete system the relevant national safety regulations for the installation site and the generally applicable state of the art must be observed. These can be determined through applicable harmonised standards, among other things, e.g. IEC 60079-14. Additional national regulations pertaining to initial operation, operation, maintenance, repairs and disposal must be observed.

When conveying flammable gases, avoid potential exothermic reactions in your system, do not use materials with a catalytic effect in the conveyor lines. Dangerous rises in temperature could result. Sample gas pump materials in contact with media are listed in this operating manual to facilitate the safety assessment.

Adiabatic compression is part of the physical operating principle of bellows pumps. Dangerous rises in temperature cannot be ruled out with improper exceeding of the operating parameters. Conveying flammable gasses then pose an explosion hazard.

Avoid these dangerous circumstances. If necessary, the complete system should be secured against flashback. Follow these notices and the applicable national regulations, prevent malfunctions to avoid personal injury and property damage.

The operator of the system must ensure:
– The equipment is only installed by a professional familiar with the safety requirements and risks,
– Safety notices and operating instructions are available and observed,
– The permissible data and operating conditions are observed,
– Protective devices are used and mandatory maintenance is performed,
– Legal regulations are observed during disposal.

Maintenance, Repair

Please note during maintenance and repairs:
– Repairs to the unit must be performed by Bühler authorised personnel.
– Only perform conversion-, maintenance or installation work described in these operating and installation instructions.
– Always use genuine spare parts.

Always observe the applicable safety and operating regulations in the respective country of use when performing any type of maintenance.

**DANGER**

**Electrical voltage**

Electrocution hazard.

a) Disconnect the device from power supply.

b) Make sure that the equipment cannot be reconnected to mains unintentionally.

c) The device must be opened by trained staff only.

d) Regard correct mains voltage.

**DANGER**

**Danger of explosions, danger of poisoning from poisonous corrosive gases**

During maintenance work, depending on the medium used, explosive and/or poisonous corrosive gases could escape, and this could lead to a danger of explosion or could be hazardous to health.

a) Inspect the leak tightness of your sampling system before putting the device into operation.

b) Ensure that gases that are hazardous to health are discharged safely.

c) Turn off the gas supply before beginning any maintenance or repair work and flush the gas lines with inert gas or air. Secure the gas supply so that it cannot be turned on unintentionally.

d) Protect yourself during maintenance from poisonous / corrosive gases. Wear appropriate protective equipment.
**DANGER**

**Potentially explosive atmosphere**
Explosion hazard if used in hazardous areas. The device is not suitable for operation in hazardous areas with potentially explosive atmospheres.

**DANGER**

**Explosion hazard**
Life and explosion risk may result from gas leakage due to improper use.

a) Use the devices only as described in this manual.
b) Regard the process conditions.
c) Check tubes and hoses for leakage.

**DANGER**

**Adiabatic compression (explosion hazard)!
**
In case of adiabatic compression, high gas temperatures may occur. The operator is responsible to consider this situation. Make sure to obey the allowed technical specifications and ambient conditions, take special attention to the media temperature with respect to temperature class T4. These vary in addition to gas composition and ambient conditions. Where necessary, the operator must install temperature sensors for monitoring and must automatically shut down the sample gas pump should the temperature exceed the limits.

**DANGER**

**DANGER - Explosion danger in case of high temperatures**
Temperature of the device depends on the medium temperature. Correlation between medium temperature and temperature classes is given in chapter "Technical data". Observe maximum temperature classes T4 for the pumps and the allowed ambient temperatures and medium temperatures.

**DANGER**

**Danger of explosion due to exothermic reactions**
Avoid catalytic materials in the conveyor pipelines and other materials, e.g. male stud couplers, connecting to the sample gas pump. Depending on the particular medium conveyed (e.g. ethylene oxide), a polymerisation of the medium may occur. Heat build-ups are possible and constitute an ignition source. If necessary, for clarification consult a technical department that possesses sufficient chemical expertise.

**DANGER**

**Explosion hazard**
Flammable media fed into the pump may only be heated to a maximum of 80 % of their respective ignition temperature.

**CAUTION**

**Tilting risk**
Damage of the device
Secure the device against any sudden translocation during maintenance.

**CAUTION**

**Hot surface**
Burning hazard
According to the product type and operation conditions, the temperature may exceed 50 °C during operation. Depending on the conditions at the installation site it may be necessary to provide these areas with appropriate warning signs.
3 Transport and storage

The products should be transported only in its original packaging or a suitable replacement.
When not in use, protect the equipment against moisture and heat. Keep it in a covered, dry and dust-free room at a temperature of -20 °C to +40 °C.
Outdoor storage is forbidden. As a matter of principle, the operator must regard all applicable standards according prevention of damage due to lightning, which may otherwise damage the sample gas pump.
The storage room must not be equipped with any ozone-producing devices like fluorescent light sources, mercury arc lamps, electric high voltage devices.
4 Installation and connection

Check the equipment for damage before installation. Among other things, this could be a damaged housing, supply cables, etc.. Never use equipment with obvious damage.

**CAUTION**

**Use appropriate tools**

According to DIN EN 1127-1, the operator is responsible to select and use appropriate tools.

### 4.1 Requirements to the installation site

**CAUTION**

**Damage to the device**

Protect the equipment against dust, falling objects and external impacts.

**Stroke of lightning**

Outdoor installation is **forbidden**. As a matter of principle, the operator must regard all applicable standards according prevention of damage due to lightning, which may otherwise damage the device.

**CAUTION**

**Avoid vibrations and resonances**

The operator is responsible to mount the pump in a way that vibrations and resonance do not cause premature failure resulting in creating an effective ignition source.

The sample gas pump P1.2 (without housing) is an integrated unit which may only be operated inside a housing providing adequate protection against touching live or moving parts (fan). Water and contaminants must be prevented from entering. Never block the vent, and the exhaust air — including from adjacent units — must not be immediately suctioned in.

The motor is rated for ambient temperatures of 0 °C to +50 °C as well as installation altitudes ≤ 1000 m above sea level.

Please refer to chapter "Appendices [page 26]" at the end of the operating and installation instructions for additional installation site ambient parameters.

### 4.2 Installation

**CAUTION**

**Damage to the device**

Protect the device, especially the gas inlets and tubes, against dust, falling parts and external impact.

Use suitable rubber-metal buffers when installing to mounting plates. We recommend buffers with a diameter or 10 mm, a height of 10 mm and a shore hardness of 70. These are also available from us.

The base angle of the sample gas pump features 4x M4 tapped holes for mounting the buffers. Suitable buffers and assembly brackets are accessories which may be ordered separately from us.

While installing the sample gas pump, there must be sufficient spacing between the motor and the rear wall (20mm).
If you are using a sample gas pump with housing (type P1.2E), the required distance between the housing and the rear wall is 50mm. This is due to the minimum permitted bending radius of the power supply line.

The specific mounting bracket for the various product variants can be obtained as an accessory. Using the appropriate mounting bracket guarantees the correct distance between the device and the rear wall.

4.3 Special condition moist sample gas

Applications where the sample gas is still moist may result in condensate forming in line and the pump body. In these events the pump head must be suspended (pump body facing down).

If the pump was not ordered this way, it can easily be converted on site.

Install the line between the gas output and condensate drain with a grade so the condensate can drain and does not collect inside the pump or the lines.

4.3.1 Conversion to pump body pointing down

Loosen the 3 Torx screws (M3x8) on the front cover (Torx T10).
Remove the cover.

Loosen and remove the 4 cross-drive screws (M4x6) on the console.

Carefully turn the pump unit 180°.
Then reinstall the 4 cross-drive screws and tighten to 3 Nm.
Before tightening the screws be sure the pump unit is centered in the base angle.
Now reinstall the front cover and secure using the 3 M3x8 Torx screws.

### 4.4 Connecting the gas lines

The G1/4” threaded holes for the respective screw-in connections are factory closed with plastic plugs to protect from dirt. Screw-in connections are generally not included in delivery, but are sold separately for metric or for imperial installation.

Avoid mixed-material installation, i.e. piping on plastic bodies. If this cannot be avoided in isolated applications, screw the metal connections into the PTFE pump body with care, never use force.

Lay the lines so the line at the inlet and outlet remains flexible for an adequate distance (pump vibrates).

The pumps are marked “In” for inlet and “Out” for outlet. Be sure the gas line connections are tight.

#### 4.4.1 Monitoring the sample gas pump

<table>
<thead>
<tr>
<th><strong>NOTICE</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>When following preventive maintenance according to the maintenance plan, a crack in the bellows is a rare malfunction, but cannot be completely eliminated.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>NOTICE</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>If the bellow cracked, turn the pump off immediately!</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>NOTICE</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>If flammable gases (even above upper explosion limit (UEL)) or toxic gases are supplied, continuous monitoring of the pump is mandatory.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>DANGER</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Explosion hazard, danger of poisoning!</strong></td>
</tr>
<tr>
<td>A crack in the bellows when conveying flammable or poisonous gasses may allow explosive or poisonous gas mixtures to leak or develop. Monitor the pump with a flow- and/or vacuum monitoring system (see flow diagram). If a pump defect occurs, shut it off immediately.</td>
</tr>
</tbody>
</table>

#### 4.4.1.1 General monitoring measures

Since a crack in the bellows allows the ambient atmosphere to be sucked in and the sample gas pump continues to generate pressure, the bellows of the sample gas pumps must be inspected regularly.

In addition, the flow rate of the pump (to the sample gas outlet) must be monitored with a suitable flow meter.

For more information or inspecting the bellow the maintenance schedule, please refer to the chapter Maintenance at the end of the operating and installation instructions.
4.4.1.2 Monitoring measures when conveying flammable and/or toxic gasses

Conveying flammable and/or toxic gasses further requires continuous monitoring of the sample gas pump during operation. This can be done as follows (1) or (2).

1. Flow rate monitor before the pump’s gas inlet or after the gas outlet. A sudden reduction of the suction volume / flow volume ahead of the pump and consistent or suddenly increased flow volume after the pump indicates a defective bellow (the pump can convey ambient air suctioned in due to the tear).

2. Vacuum monitoring before the pump’s gas inlet and flow monitoring after the gas outlet (see illustration). A sudden drop in the vacuum before the gas inlet indicates a defective bellow.

When conveying flammable gasses above the upper explosive limit (UEL) we further recommend monitoring the lower explosive limit (LEL) in the installation location.

When conveying toxic gasses we recommend MAC monitoring (MAC: Maximum Workplace Concentration) at the installation site.

![Sample flow diagram of suitable monitoring](image)

Fig. 1: Sample flow diagram of suitable monitoring

4.5 Electrical connections

**WARNING** Hazardous electrical voltage

The device must be installed by trained staff only.

**CAUTION** Wrong mains voltage

Wrong mains voltage may damage the device. Regard the correct mains voltage as given on the type plate.

A switch or circuit breaker (according to IEC 60947-1 and IEC 60947-3) must be installed for the sample gas pump. It must be easy for the operator to reach. The switch must be marked as a cut-off for the device. It mustn’t be integrated into a supply cable or interrupt the earth conductor. It must further separate all poles of the sample gas pump from live parts.

Only operate the unit with the factory installed motor. The user must not exchange the unit or replace it with a different motor. The sample gas pump must be protected against prohibited heating with suitable overload protection (protective motor switch).

Note the rated current of the circuit breaker switch (230 V = 0.48 A, 115 V = 0.84 A).

Also verify the pump motor has the correct voltage and frequency (voltage tolerance ± 5 % and frequency tolerance ± 2%).

The P1.2 pump (115 V / 230 V) is connected to the electrical using size 6.3 mm blade terminals.

A 3 m connection cable is standard with the model P1.1E sample gas pump.

If your sample gas pump has a factory-installed on/off switch on the housing (only P1.2E), verify it is set to the zero position before connecting to power.

**WARNING** Hazardous electrical voltage

The On/Off switch does not ensure switching off all poles.
Connect the protective earth to the motor’s earth blade connection. On model P1.2E the protective earth must be connected to the yellow/green strands of the connecting cable (see Fig. Electrical connections P1.2 pumps).

The supply line and earthing cross-sections must be aligned with the rated current.

Use a minimum line cross-section of 0.75 mm² for the electrical connection and particularly the protective earth.

Be sure to observe any varying information in the rating plate. The conditions at the site must correspond with all rating plate information.

Take appropriate measures to protect energised parts from being touched by persons and/or interference from foreign objects.

---

**Fig. 2: Electrical connections P1.2 pumps**

---
5 Operation and control

**NOTICE**

The device must not be operated beyond its specifications.

**DANGER**

**Danger of explosions, danger of poisoning from poisonous corrosive gases**

During maintenance work, depending on the medium used, explosive and/or poisonous corrosive gases could escape, and this could lead to a danger of explosion or could be hazardous to health.

a) Inspect the leak tightness of your sampling system before putting the device into operation.

b) Ensure that gases that are hazardous to health are discharged safely.

c) Turn off the gas supply before beginning any maintenance or repair work and flush the gas lines with inert gas or air. Secure the gas supply so that it cannot be turned on unintentionally.

d) Protect yourself during maintenance from poisonous / corrosive gases. Wear appropriate protective equipment.

**DANGER**

**Adiabatic compression (explosion hazard)**

In case of adiabatic compression, high gas temperatures may occur. The operator is responsible to consider this situation.

Make sure to obey the allowed technical specifications and ambient conditions, take special attention to the media temperature with respect to temperature class T4. These vary in addition to gas composition and ambient conditions. Where necessary, the operator must install temperature sensors for monitoring and must automatically shut down the sample gas pump should the temperature exceed the limits.

**DANGER**

**Dangerous electrostatic charge (explosion hazard)**

Conveying e.g. very dry and particle-loaded gasses can result in incendive electrostatic charges in the bellow / pump body.

Install particle filtration with an appropriately fine filter ahead of the pump gas input. Sampling explosive gaseous media (max. zone 2) with P1.2 / P1.2E pumps is prohibited if the gas flow results in an incendive electrostatic charge in the bellow / pump body (projected surface in the bellow / pump body ~ 9 cm²).

**DANGER**

**Explosion hazard**

Flammable media fed into the pump may only be heated to a maximum of 80 % of their respective ignition temperature.

**CAUTION**

**Hot surface**

Burning hazard

According to the product type and operation conditions, the temperature may exceed 50 °C during operation.

Depending on the conditions at the installation site it may be necessary to provide these areas with appropriate warning signs.
5.1 Switching on the sample gas pump

Before switching on the unit, check:
- the hose- and electrical connections are not damaged and correct installed.
- no parts of the sample gas pump have been removed (e.g. cover).
- the gas inlet and outlet of the sample gas pump are not closed.
- the pre-pressure is below 0.3 bar.
- a bypass is installed for continuous operation for throttling below 150 L/h
- ambient parameters are met.
- data on the rating plate is met.
- the voltage and frequency of the motor match the mains values.
- electrical connections are securely connected and monitoring devices are connected and set as prescribed.
- air inlets and cooling surfaces are clean.
- ventilation slots in the housing cover are not covered or dirty, but are freely accessible.
- precautions have been taken; earthing!
- the necessary safety and monitoring devices, depending on the application, are installed and functional (e.g. protective motor switch, manometer, flame arrester, temperature monitor, depending on pump type).

When switching the sample gas pump on make sure that
- no abnormal sounds or vibrations occur.
- the flow rate is neither too low nor too high. This would indicate a cracked bellow.

5.2 Operating the sample gas pump

**CAUTION**

Risk of injury by moving parts

The device may be damaged if it falls down of by impacts. Pay attention to any accessible moving parts.

Operation without cover or with damaged cover is not allowed!

The sample gas pump is suitable for delivering gases only. It is not suitable for liquids.
The sample gas pump should be operated without pressure. A system pressure above 0.3 is not allowed. The gas outlet must not be closed. The flow rate must be at least 50 l/h (150 l/h with system pressure 0.3 bar). If the flow rate continuously is throttled below 150 l/h during operation, the flow rate must be controlled with a bypass valve.

**NOTICE**

Extreme throttling reduces the life time of the bellow.

If the pump is equipped with a bypass valve, the flow rate can be adjusted. Do not apply force when turning the valve, because the valve may be damaged otherwise! The turning range of the valve is about 5 turns.
6 Maintenance

Maintenance work on the device must be carried out in a cooled state.

During maintenance, remember:
- The equipment must be maintained by a professional familiar with the safety requirements and risks.
- Only perform maintenance work described in these operating and installation instructions.
- When performing maintenance of any type, observe the respective safety and operation regulations.

**NOTICE**

Please refer to the spare parts drawings attached when performing maintenance.

**DANGER**

**Electrical voltage**

Electrocution hazard.

- Disconnect the device from power supply.
- Make sure that the equipment cannot be reconnected to mains unintentionally.
- The device must be opened by trained staff only.
- Regard correct mains voltage.

**CAUTION**

**Tilting risk**

Damage of the device.
Secure the device against any sudden translocation during maintenance.

**CAUTION**

**Gas leakage**

The sample gas pump should not be dismantled under pressure.

**DANGER**

**Danger of explosions, danger of poisoning from poisonous corrosive gases**

During maintenance work, depending on the medium used, explosive and/or poisonous corrosive gases could escape, and this could lead to a danger of explosion or could be hazardous to health.

- Inspect the leak tightness of your sampling system before putting the device into operation.
- Ensure that gases that are hazardous to health are discharged safely.
- Turn off the gas supply before beginning any maintenance or repair work and flush the gas lines with inert gas or air. Secure the gas supply so that it cannot be turned on unintentionally.
- Protect yourself during maintenance from poisonous / corrosive gases. Wear appropriate protective equipment.

**DANGER**

**Explosion hazard due to incorrect replacement of components**

The replacement of the components requires carefulness. Inexpert operation could lead to explosion.
If you feel uncertain about any details of the operation, please bear in mind that the replacement should be done by the manufacturer only.
According to the product type and operation conditions, the temperature may exceed 50 °C during operation. Depending on the conditions at the installation site it may be necessary to provide these areas with appropriate warning signs.

Depending on the quality of the sample gas to be pumped, the valves in the inlet and the outlet may have to be changed from time to time.

If the valves are heavily contaminated, in particular after just a short period of operation, then you should provide for particle filtration before the pump. This will increase the service life considerably.

### 6.1 Maintenance plan

<table>
<thead>

</tr>
</tbody>
</table>

### 6.2 Inspecting the bellow

When following preventive maintenance according to the maintenance plan, a crack in the bellows is a rare malfunction, but cannot be completely eliminated.

If the bellow cracked, turn the pump off immediately!

If flammable gases (even above upper explosion limit (UEL)) or toxic gases are supplied, continuous monitoring of the pump is mandatory.
Explosion hazard, danger of poisoning!

A crack in the bellows when conveying flammable or poisonous gases may allow explosive or poisonous gas mixtures to leak or develop.

Monitor the pump with a flow- and/or vacuum monitoring system (see flow diagram).

If a pump defect occurs, shut it off immediately.

Since a crack in the bellows allows the ambient atmosphere to be sucked in and the sample gas pump continues to generate pressure, the bellows on the sample gas pump must be inspected regularly.

This is done by connecting a suitable shut-off unit and a suitable vacuum pressure gauge ahead of the sample gas input (see illustration). If during operation, after closing the suction line, no negative pressure is produced, the bellows is defective and must be replaced.

Please refer to the Maintenance schedule for maintenance intervals.

Fig. 3: Inspecting the bellows

6.3 Replacing the inlet and outlet valves

First detach the screw connections.

Unscrew the inlet or outlet valve with a wide slot screwdriver.

Attention: The PVDF and PVDF with bypass valve pump bodies already have PTFE gaskets installed in the gas inlets and outlets. These are also included in the valve spare parts kit. Remove the old gaskets before installing the new ones.

The inlet and outlet valves are identical. Their installation position determines the function. As shown in the image, the valves are blue on one side and black on the other. The valves are further marked “IN” or for inlet and “OUT” for outlet.

To assemble the sample gas pump, perform the steps in reverse order. When tightening the inlet and outlet valves be sure to observe the required tightening torque of max. 1 Nm. CAUTION! Tightening the valves more will permanently deform the pump body, requiring replacement.

When installing the screw connection, ensure the connection is tight.
6.4 Replacing the O-ring on the bypass valve (optional)

- Loosen the two screws on the valve plate and carefully remove the entire unit.
- Coat the new O-ring with suitable O-ring grease (e.g. Fluoronox S90/2) and install in the spindle.
- Carefully insert the entire unit into the pump body while turning and tighten screws.

6.5 Replacing parts inside the pump housing

First detach the screw-in connections as described in chapter „Conversion to pump body pointing down“.
Loosen the 4 M4x18 fillister head screws and lift the pump head along with mounting ring and foam cover off the console.

6.6 Replacing the bellow

To replace the bellow carefully unscrew it from the connecting rod counter clockwise. Be sure not to lose any installed shims.
Before reinstalling the bellow be sure it is not damaged.
Reinstall hand tight in reverse order.
6.7 Crank gear replacement

<table>
<thead>
<tr>
<th>NOTICE</th>
<th>Restrictions for connecting rod-eccentric replacement</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The individual replacement of the eccentric, connecting rod or bearings is not allowed. Only the factory pre-assembled connecting rod-eccentric combination is suitable for replacement by the operator.</td>
</tr>
</tbody>
</table>

The crank gear consists of the connecting rod with ball bearing and eccentric.

After removing the bellow remove the set-screw inside the eccentric M3 using a size 1.5 setscrew wrench.

The crank gear may now be removed from the motor shaft.

Before installing the replacement part remove any rust residue on the motor shaft and coat with non-resinous oil.

Reinstall the set screw with a drop of medium-strength threadlocker. When tightening the set screw, be sure it is seated in the locking hole on the shaft. Once it touches the bore, tighten the set screw 90° more.

6.8 Assembly of the sample gas pump

If the sample gas pump was removed, install in reverse order. Be sure the sealing surfaces of the bellow and pump head are clean and aren’t scratched (even minimal grooves can cause leaks). First evenly tighten the 4 M4x18 fillister head screws at 1 Nm. Then tighten the screws to 3 Nm.

**CAUTION!** Tighten each screw only once at 3 Nm. The bellow and pump body material (PTFE) is very weak and has high flow properties.

Check the sample gas pumps for tightness and proper function.

6.9 Cleaning the pump console

- Remove the three screws on the housing cover and remove the housing cover (see chapter Conversion to pump body pointing down [> page 10]).
- Pay special attention to the ventilation slots in the cover being free of dust and other dirt.
- Clean any dust and other dirt off the sample gas pump.
- Wipe off stubborn dirt with a damp, clean cloth (do not use solvent-containing cleaning products).
- Reinstall housing cover and tighten the three screws on the housing cover.
7 Service and repair

This chapter contains information on troubleshooting and correction should an error occur during operation.

Repairs to the unit must be performed by Bühler authorised personnel.

Please contact our Service Department with any questions:

**Tel.: +49-(0)2102-498955** or your agent

If the equipment is not functioning properly after correcting any malfunctions and switching on the power, it must be inspected by the manufacturer. Please send the equipment inside suitable packaging to:

**Bühler Technologies GmbH**

- **Reparatur/Service** -

  **Harkortstraße 29**

  **40880 Ratingen**

  **Germany**

Please also attach the completed and signed RMA decontamination statement to the packaging. We will otherwise be unable to process your repair order.

You will find the form in the appendix of these instructions, or simply request it by e-mail:

**service@buehler-technologies.com**

7.1 Troubleshooting

**CAUTION**  
**Risk due to defective device**

- Personal injury or damage to property
- a) Switch off the device and disconnect it from the mains.
- b) Repair the fault immediately. The device should not be turned on again before elimination of the failure.

**CAUTION**  
**Hot surface**

- Burning hazard
- According to the product type and operation conditions, the temperature may exceed 50 °C during operation.
- Depending on the conditions at the installation site it may be necessary to provide these areas with appropriate warning signs.
## Problem / Failure

### Possible cause

- Mains disrupted or not correctly mounted
- Valves damaged or spoiled
- Bypass valve open
- Bellow cracked
- Crank gear worn-out
- Leakage

### Solution

- Check fitting, fuse and switches
- Blow out valves carefully or replace them
- Close bypass valve
- Replace bellow
- Replace crank gear
- Re-tighten the head screws, regard allowed torque (see chapter Assembly of the sample gas pump).
- Check bellow and replace it, if necessary
- Blow out valves carefully or replace them

**Tab. 1: Trouble shooting**

### 7.2 Spare parts and accessories

Please also specify the model and serial number when ordering parts.

Upgrade and expansion parts can be found in our catalog.

Tab. 3: List of chemical resistance

0 - resistant
1 - practically resistant
2 - partially resistant
3 - not resistant
4 - no data available

Two values are given for each medium, left number = value at 20 °C (68 °F), right number = value at 50 °C (122 °F) Temperature.

**Important note**

The tables headed “Chemical resistance of plastics” and “Properties of plastics materials” have been compiled from information from various producers of raw materials. The figures relate exclusively to laboratory tests on raw materials. Plastics items made from these materials are often subject to influences which cannot be detected in a laboratory test (temperature, pressure, stresses in the material, chemical substances, design features, etc.). For these reasons the figures quoted can serve only as a guideline. In case of doubt we strongly recommend that a test be carried out. No legal claims can be derived from these figures and we disclaim all liability. The chemical and mechanical resistance of a product does not suffice for the assessment of its suitability for use, for example legislation on flammable liquids (explosion protection) is to be taken into particular consideration. Chemical resistance for other substance on request.

**Hinweis!**

Pumpenkörper PVDF und Befestigungsring PVDF weichen optisch von der Abbildung ab

**Note!**

Pumphead PVDF and mounting ring PVDF differ in the optic of the drawing
Hinweis:
Der O-Ring ist vor dem Fügen mit Fluoronox S90/2 einzufetten
The o-ring must be lubricate with Fluoronox S90/2 before adding
EU-Konformitätserklärung
EU-declaration of conformity

Hiermit erklärt Bühler Technologies GmbH, dass die nachfolgenden Produkte „Geräte“ im Sinne der Richtlinie 2014/34/EU (Atex) in ihrer aktuellen Fassung sind. The following products are "equipment" according to Directive 2014/34/EU (Atex) in its actual version.

Folgende Richtlinien wurden berücksichtigt: The following directives were regarded:
2014/30/EU (EMV/EMC)
2014/35/EU (NSR/LVD)

Produkt / products: Messgaspumpe /Sample gas pump
Typ / type: P1.2, P1.2E

Die Produkte werden entsprechend der derzeitig gültigen Atex-Richtlinie innerhalb der internen Fertigungskontrolle folgendermaßen gekennzeichnet:
The products are marked according to the currently valid Atex directive during internal control of production:

II 3G/- c IIB T4

Zur Beurteilung der Konformität gemäß Atex-Richtlinie wurden folgende harmonisierte Normen herangezogen:
For the assessment of conformity according to the Atex directive the following standards have been used:

EN 13463-1:2009
EN 13463-5:2011

Die alleinige Verantwortung für die Ausstellung dieser Konformitätserklärung trägt der Hersteller. This declaration of conformity is issued under the sole responsibility of the manufacturer.

Dokumentationsverantwortlicher für diese Konformitätserklärung ist Herr Stefan Eschweiler mit Anschrift am Firmensitz.
The person authorised to compile the technical file is Mr. Stefan Eschweiler located at the company's address.

Um eine schnelle und reibungslose Bearbeitung Ihres Anliegens zu erreichen, füllen Sie bitte diesen Rücksendeschein aus. Eine genaue Fehlerbeschreibung ist für die Ursachenanalyse nötig und hilft bei der schnellen Bearbeitung des Vorgangs. Die Aussage „Defekt“ hilft bei der Fehlersuche leider nicht.

Die RMA-Nummer bekommen Sie von Ihrem Ansprechpartner im Vertrieb oder Service.

Bringen Sie den Rücksendeschein mit der Dekontaminierungsersklärung bitte zusammen mit den Versandpapieren in einer Klarsichthülle außen an der Verpackung an. Ansonsten ist eine Bearbeitung Ihres Reparaturauftrages nicht möglich!

[ ] Ich bestätige hiermit, dass das oben spezifizierte Gerät ordnungsgemäß gereinigt und dekontaminiert wurde und keinerlei Gefahren im Umgang mit dem Produkt bestehen.

Ansonsten ist die mögliche Gefährdung genauer zu beschreiben:

Aggregatzustand (bitte ankreuzen):
- Flüssig / Liquid
- Fest / Solid
- Pulvrig / Powdery
- Gasförmig / Gaseous

Folgende Warnhinweise sind zu beachten (bitte ankreuzen):
- Explosiv
- Giftig / Tödlich
- Entzündliche Stoffe
- Brandfördernd
- Komprimierte Gase
- Gesundheitsgefährdend
- Gesundheitsschädlich
- Umweltgefährdend

Bitte legen Sie ein aktuelles Datenblatt des Gefahrenstoffes bei!
